

aquamat 20

Compact all-purpose spray extraction machine

Key features

- Excellent deep cleaning results
- All-round flexibility
- Ease of transportation
- Complete range of accessories

Excellent deep cleaning

Deep cleaning through spray extraction is the ultimate way of thoroughly cleaning your carpets. It increases the lifetime of your carpets by removing ingrained dirt whilst maintaining the high appearance levels of your carpet.

All-round flexibility

Its tank volume makes the TASKI aquamat 20 ideal for the deep cleaning of small-to-mid-sized congested areas. The powerful vacuum motor allows for an optional 6 m hose to be attached, so that you can leave the machine at the bottom of the stairs or outside the cleaning area, increasing your flexibility. The variable product dosing allows for efficient and productive cleaning as well as the ability to tackle deeply soiled areas.

Ease of transportation

The user-friendly design, large wheels and steering handle allow for easy movement between locations.

Complete range of accessories

The spray device can be used to pre-spray carpet detergent before deep cleaning, maximising cleaning results. The optional 12 cm hand nozzle facilitates deep cleaning of upholstery, stairs and other hard-to-reach areas. The carpet pile brush lifts the carpet fibres, gives the entire surface a uniform, even appearance and reduces drying time.

Technical data			
Solution tank	22 L 18 L 47 L/s 22	Nominal consumption	1050 W
Recovery tank	kPa 800 x 380 x 720	Cable length	15 m

Spray extraction tool with hose (2.2 m) and fixed nozzle	8505140
Spray extraction tool with hose (2.2 m) and flexible nozzle	8505160
Hose (6 m)	8505170

Additional Features
Suitable for hard floor and carpet cleaning Depending on the accessories chosen, the TASKI aquamat 20 can be used for either hard floor cleaning or carpet spray- extraction. When choosing both tool sets, the TASKI aquamats really become a multi-functional piece of equipment. The hard floor tool is especially suited to small-to-medium-sized areas like kitchens and washrooms. The solution spray, together with the hard floor bristle, provides effective mechanical action. With the direct method, the soiled solution is directly removed from the floor. With the indirect method, the solution is left on the surface for a short period to increase contact time and is then removed with the hard floor tool by using the vacuum function of the TASKI aquamat 20. The tool provides excellent cleaning results, also on difficult-to-clean hard surfaces like ceramic tiles and anti-slip floor ings.
